Revision History

Version	Description	Date
V1.0	Initial release.	December 25, 2011
V1.1	Moved the Enter/Exit Setup barcodes to page header and footer.	August 10, 2012
V1.2	Updates: 1. Added the Timeout between Decodes (Same Barcode) programming feature for the Sense and Continuous modes. 2. Added PDF417 and MicroPDF417 sample barcodes in Chapter 6.	March 19, 2013
V1.3	Updates: 1. Added the Hands-free Scanning and Manual-Sense Mode Switch features in Chapter 2. 2. Added the Manual-Sense Mode Switch and Wait Time parameters in the Factory Defaults Table.	August 20, 2013
V1.4	Updates: 1. Added the German keyboard, Emulate Alt+Keypad, Function Key Mapping, Emulate Numeric Keypad and HID-POS features in Chapter 4. 2. Added ASCII Table and ASCII Function Key Mapping Table in Appendix .	October 28, 2013
V1.5	Added the Transmit UPC-E/UPC-A Preamble Character features in Chapter 6.	December 24, 2013
V1.6	Added the IBM-SurePOS feature in Chapter 4.	June 26, 2014
V1.7	Added the Convert Code 39 to Code 32 (Italian Pharma Code) and Code 32 Prefix features in Chapter 6.	November 28, 2014
V1.8	Updates: 1. Added a new chapter – Chapter 7 Data Formatter. 2. Added the Febraban and EAN-13 Prefix Add-On Code Modes features in Chapter 6. 3. The PIDs of USB HID-KBW and USB COM Port are changed to 0x0C03 and 0x0C06 respectively in Chapter 4. Note: You must have firmware version V2.13.018 or higher to use the new features above.	December 30, 2015

Preface

Introduction

This manual provides detailed instructions for setting up and using the NLS-HR1550-30 hand-held barcode scanner (hereinafter referred to as “**HR15 corded scanner**” or “**the scanner**”).

Chapter Description

- | | | |
|---|--|--|
| ✧ | <i>Chapter 1, Getting Started</i> | : This chapter gives a general description of HR15 corded scanner including its technical parameters. |
| ✧ | <i>Chapter 2, General Settings</i> | : This chapter introduces two methods to configure the HR15 corded scanner: barcode programming and command programming. |
| ✧ | <i>Chapter 3, Inquiry Command</i> | : This chapter describes how to obtain the information of HR15 corded scanner by scanning programming barcodes. |
| ✧ | <i>Chapter 4, Communication Settings</i> | : This chapter describes how to configure serial port parameters and USB function. |
| ✧ | <i>Chapter 5, Prefix & Suffix</i> | : This chapter describes how to use prefix and suffix to customize scanned data. |
| ✧ | <i>Chapter 6, Symbologies</i> | : This chapter lists all compatible symbologies and describes how to configure the relevant parameters. |
| ✧ | <i>Chapter 7, Data Formatter</i> | : This chapter explains how to customize scanned data with the data formatter. |
| ✧ | <i>Appendix</i> | : This chapter offers factory defaults table and a bunch of frequently used programming barcodes. |

Document Set

The documentation set for the HR15 corded scanner provides information for specific user needs and includes:

NLS-HR1550-30 Quick Start Guide

Describes how to get the HR15 corded scanner up and running, and introduces some basic operations.

NLS-HR1550-30 User Guide

Describes how to use and set the HR15 corded scanner.

***1D Barcode Scanner Firmware Update Utility
User Guide***

Describes how to update the firmware in 1D barcode scanners with this tool developed by Newland.

Chapter 1 Getting Started

Introduction

HR15 corded scanner is a 1D barcode scanner with excellent performance. Besides all common 1D symbologies, it can also read 2D stacked symbologies such as PDF417 and MicroPDF417. Based on the **UIMG** technology independently developed by Newland, HR15 corded scanner is able to deliver rapid image acquisition and accurate decoding; it can provide customers with best services. HR15 corded scanner boasts the ergonomical design that ensures easy and comfortable operation.

An illustrated introduction to the HR15 corded scanner is included in this chapter. If you have an HR15 device at hand, make good use of it to develop a better understanding of this manual. This chapter is written for normal users, maintenance staff and software developers.

Unpacking

Open the package and take out HR15 corded scanner and its accessories. Check to make sure everything on the packing list is present and intact. If any contents are damaged or missing, please keep the original package and contact your dealer immediately for after-sale service.

Scanner

Decode/Power LED Definitions:

Red : The device is powered on

Green: Barcode is decoded successfully

Fig. 1-1

Data Port

Fig. 1-2

Data port pinout 1 (factory default):

PIN	Definition	Type	Description
1	NC	-	Not connected
2	NC	-	Not connected
3	VCC	P	Power+ (+5V)
4	TXD	O	RS-232 Output
5	RXD	I	RS-232 Input
6	CTS	I	Flow control signal
7	RTS	O	
8	GND	P	Ground
9	D-	I/O	USB signal
10	D+	I/O	

Data port pinout 2:

PIN	Definition	Type	Description
1	CLK1	I/O	Keyboard clock signal
2	DATA1	I/O	Keyboard data signal
3	VCC	P	Power+ (+5V)
4	TXD	O	RS-232 Output
5	RXD	I	RS-232 Input
6	CLK2	I/O	PC clock signal
7	DATA2	I/O	PC data signal
8	GND	P	Ground
9	D-	I/O	USB signal
10	D+	I/O	

Connect HR15 to a Host

HR15 corded scanner must be connected to a host device in actual application, such as PC, POS or any intelligent terminal with USB or RS-232 or PS/2 port, using a communication cable (USB or RS-232 or PS/2 cable).

✧ USB

USB port on the host

✧ RS-232

RS-232 port on the host

✧ PS/2

PS/2 port on the host

Note: Please check the port on the host and purchase the right cable.

Use USB Cable

Fig. 1-3

Connect HR15 corded scanner to a Host through a USB cable with RJ45 and USB connectors:

1. Plug the RJ45 connector into the data port (see Fig.1-1) on the scanner.
2. Plug the USB connector into the USB port on the Host.

Use RS-232 Cable

Fig. 1-4

Connect HR15 corded scanner to a Host through an RS-232 cable with RJ45/RS-232 connectors and a power jack:

1. Plug the RJ45 connector into the data port (see Fig.1-1) on the scanner.
 2. Plug the RS-232 connector into the RS-232 port on the Host.
 3. Plug the power adapter into the power jack.
-

Use PS/2 Cable

Fig. 1-5

Connect HR15 corded scanner to a Host through a PS/2 cable equipped with PS/2 and RJ45 connectors, PS/2 female socket and power jack (Only applicable to HR1550-33):

1. Plug the RJ45 connector into the data port (see Fig.1-1) on the scanner.
2. Plug the PS/2 connector into the PS/2 port on the Host.
3. When required, plug the power adapter into the power jack on the PS/2 cable.
4. When required, plug the keyboard into the PS/2 female socket on the cable.

Remove Communication Cable

Fig. 1-6

Get an appropriate needle or a straightened paper clip and then follow the steps below:

1. Disconnect the power adapter from mains and the scanner if there is one.
2. Insert the needle into the disassemble hole (Fig. 1-6).
3. Pull out the cable slowly from the scanner while pressing the needle in. Then remove the needle.
4. Disconnect the cable from the Host.

Power on, Power off, Sleep, Reboot

Power on the scanner

Connect the scanner to a host device. Then the scanner will be turned on and automatically go into sleep mode.

Power off the scanner

There are four ways to turn off the scanner:

- ✧ Remove the cable from the scanner.
- ✧ Remove the cable from the host device.
- ✧ Disconnect the power adapter from mains or the scanner.
- ✧ Scan the **Power Off** barcode (See the “**Operating Mode Options**” section in Chapter 2).

Enter the sleep mode

If no operation is performed on the scanner for some time, the scanner will automatically enter the sleep state.

Reboot the scanner

If the scanner stops responding to input or runs abnormally, disconnect the scanner from the host device and then reconnect it.

Maintenance

- ✧ The scan window should be kept clean.
- ✧ Do not scratch the scan window of the device.
- ✧ Use soft brush to remove the stain from the scan window.
- ✧ Use soft cloth to clean the window, such as eyeglass cleaning cloth.
- ✧ Do not spray any liquid on the scan window.
- ✧ Clean other parts of the device with water only.

Note: The warranty **DOES NOT** cover damages caused by inappropriate care and maintenance.

Depth of Field

Fig. 1-7

Specifications

Performance

Light Source	620nm visible red LED
Image Sensor	Linear imager
Symbologies	Code128, EAN-13, EAN-8, Code39, UPC-A, UPC-E, Codabar, Interleaved 2 of 5, ISBN, Code 93, UCC/EAN-128, GS1 Databar, PDF417, MicroPDF417, etc.
Resolution	≥ 4 mil
Pitch	±55° @ 0° Roll and 0° Skew
Scan Angle*	Roll ±30° @ 0° Pitch and 0° Skew
Skew	±75° @ 0° Roll and 0° Pitch
Minimum Symbol Contrast	25%
Scan Rate	300 scans per second
Interface	RS-232, USB, PS/2

Physical

Dimensions (L x W x H)	113.5 x 73 x 159 mm
Weight	152 g
Indication	Beep and LED
Power Adaptor	Output: DC5V, 1.5A Input: AC100~240V, 50~60Hz
Max. Current	185mA
Current	Working Current 135mA
Standby Current	75mA

Environmental

Operating Temperature	-10°C to 50°C (14°F to 122°F)
Storage Temperature	-20°C to 60°C (-4°F to 140°F)
Humidity	5% to 95% (non-condensing)
ESD	±8KV contact discharge; ±15KV air discharge
Drop	Withstand multiple 1.5m drops to concrete
IP Seal	IP54

Certifications

FCC Part15 Class B, CE EMC Class B

*Test conditions:

Code 39, 3 Bytes; Resolution=10mil; W:N=2.5:1; PCS=0.8; Barcode Height=40mm; Scan Distance=210mm, T=23°C, Illumination= 200 LUX

Top View

Fig. 1-10

Scanning Instructions

When the HR15 corded scanner is in the Manual mode (default), you can follow the steps below to scan a barcode:

1. Hold down the trigger. Then the scanner will project a red aiming beam.
2. Aim the red beam across the center of barcode, as shown in Fig.1-11.
3. Release the trigger when the red beam goes off. For a successful read, the scanner will beep and send the decoded data to the Host.

Note: For barcodes of the same batch, the scanner keeps a very high success ratio in certain distance which is regarded as the optimal scanning distance.

Fig. 1-11

Scan Angle

The scanner is designed to function within a certain range of scan angles. Any unreasonable deviation may cause decoding failure.

Scan angles of the scanner:

- ✧ Pitch : $\pm 55^\circ$, 0° Roll and 0° Skew (Fig. 1-12)
- ✧ Roll : $\pm 30^\circ$, 0° Pitch and 0° Skew (Fig. 1-13)
- ✧ Skew: $\pm 75^\circ$, 0° Roll and 0° Pitch (Fig. 1-14)

Chapter 2 General Settings

Introduction

There are two ways to configure the HR15 corded scanner: Barcode programming and command programming.

Barcode Programming

The HR15 corded scanner scans a series of barcodes to program features. In the following sections, we will explain the available options and features and provide the barcodes to program them.

This programming method is most straightforward. However, it requires manually scanning barcodes. As a result, errors are more likely to occur.

Command Programming

You can send the command strings through the Host to your scanner to perform configuration. In the following sections, the commands will be provided along with programming barcodes.

Users can also design an application to send those command strings to their scanners.

Note: All settings except temporary ones are stored in non-volatile memory of the scanner and will not be lost by removing power from the scanner, or turning off/ rebooting the device.

【Exit Setup】

99900031

** 【Enter Setup】

Programming Barcode/ Programming Command/Function

The figure above is an example that shows you the programming barcode and command for the Enter Setup function:

1. The **Enter Setup** barcode.
2. The **Enter Setup** command.
3. The function that can be enabled by using the programming barcode or command listed above.
4. ** indicates factory default settings.

Use of Programming Barcodes

Scanning the **Enter Setup** barcode can enable the scanner to enter the setup mode. Then you can scan a number of programming barcodes to configure your scanner.

The HR15 corded scanner is in the setup mode by default. In real application, programming barcodes hardly overlap with non-programming barcodes, so it is unnecessary to exit the setup mode each time you finish the configuration.

Some functions or options may involve parameter value settings that require scanning numeric barcodes. To find the numeric barcodes, see the “**Digit Barcodes**” section in Appendix.

The scanner can be configured to send or not to send programming barcode data (i.e. programming command) to the host device by scanning the appropriate barcode below. By default, the **Do Not Send the Programming Barcode Data** option is enabled. Note that restarting/rebooting the scanner will reset this parameter to its default value.

99900034

【Send the Programming Barcode Data】

99900033

** 【Do Not Send the Programming Barcode Data】

99900032

【Exit Setup】

** 【Enter Setup】

Use of Command

Based on serial port communication, programming commands can be composed of printable ASCII characters, 0x20 (space) through 0x7D (“}”).

Programming Mode

Before configuring the HR15 corded scanner through serial communication, the device must enter the programming mode; in such mode, the device will only accept and process commands and respond accordingly.

You can enable the device to enter or exit the programming mode by sending the specified commands to it. In the event that the device receives no data for 5 seconds, it will exit the programming mode automatically.

Command Format

1. Enter the programming mode: send “\$\$\$\$” from the Host to the scanner, the scanner returns a reply of “@@@@” to indicate success.
2. Exit the programming mode: send “%” from the Host to the scanner, the scanner returns a reply of “^” to indicate success.
3. Receiving “^” from the scanner when the Host did not send “%” to it indicates the scanner has automatically exit the setup mode.
4. A command string consists of “#”, programming command and “;”, such as “#99900030;”.
5. If a command string is properly processed, the scanner will return a reply consisting of “!”, programming command and “;”, such as “!99900030;”.
6. If the scanner receives an invalid command string or fails to process a command string, it will return a reply consisting of “?”, programming command and “;”, such as “?99900030;”.
7. If a query command is properly processed, the scanner will return a reply containing “!”, programming command and “;”, as well as “&{”, query result and “}”. For example:

send a query command of “#99900301;” to get the firmware version information,
the Host will receive a reply of “!99900301;&{Firmware v1.7.5;Decoder v1.00.023.C6;|FD25430B}”.

Description:

In the reply, “Firmware v1.7.5;Decoder v1.00.023.C6” is the query result; “|” is a separator; and “FD25430B” is the CRC32 checksum value in hexadecimal format.

【Exit Setup】

99900031

**** 【Enter Setup】**

8. If a command involves parameter(s), they shall be combined as per the rule.

For example: The combined commands for appending terminating character suffix 0x0D (CR),0x0A (LF) to the scanned data and saving the settings:

"#99904112;#99900000;#99900015;#99900000;#99900012;#99900020;".

99900032

【Exit Setup】

** 【Enter Setup】

Configuration Process Flow

【Exit Setup】

99900031

** 【Enter Setup】

Default Settings

Restore Factory Default Settings

Scanning the **Reset Scanner** barcode can restore the scanner to the factory default settings.

You may need to reset your scanner when:

1. scanner is not properly configured so that it fails to decode barcodes;
2. you forget previous configuration and want to avoid its impact;
3. functions that are rarely used have been enabled for the time being.

99900030

Note:

1. The scanner that has been turned off in this way cannot be awakened. To turn it back on, disconnect it from the host device and reconnect it.
2. To awaken the scanner, press the trigger.
3. To awaken the scanner, press the trigger or communicate with the scanner.
4. Pressing the trigger can exit the Test mode.

The Test mode, Deep Sleep mode and Light Sleep mode are available for temporary use only. They will become invalid after the scanner is restarted/rebooted.

99900032

【Exit Setup】

99900031

** 【Enter Setup】

Scan Mode

Manual Mode

Manual Mode (default): A trigger pull activates a decode session. The decode session continues until the barcode is decoded or you release the trigger or the decode session timeout expires (default: 15 seconds; programmable).

99900110

** 【Manual Mode】

Decode Session Timeout: This parameter sets the maximum time decode session continues during a scan attempt. The default timeout is 15s.

To program this parameter, scan the **Decode Session Timeout** barcode and the numeric barcodes. To find the numeric barcodes, see the “**Digit Barcodes**” section in Appendix.

99900150

【Decode Session Timeout】

Note: Decode Session Timeout: 01-15, corresponding to 1s, 2s, …, 15s (default), in 1s increments; 00: infinite.

99900032

【Exit Setup】

** 【Enter Setup】

Auto Mode

Auto Mode: Pressing the trigger activates a decode session. The decode session continues until the barcode is decoded or the decode session timeout expires (default: 15 seconds; programmable). The scanner automatically starts one session after another until you press the trigger a second time.

【Auto Mode】

【Exit Setup】

99900031

** **【Enter Setup】**

Decode Session Timeout: This parameter sets the maximum time decode session continues during a scan attempt. The default timeout is 15s.

To program this parameter, scan the **Decode Session Timeout** barcode and the numeric barcodes. To find the numeric barcodes, see the “**Digit Barcodes**” section in Appendix.

Note: Decode Session Timeout: 01-15, corresponding to 1s, 2s, …, 15s (default), in 1s increments; **00**: infinite.

You can also configure whether to allow rereading same barcode. By default, rereading same barcode is not allowed.

99900150

【Decode Session Timeout】

99900155

** **【Disallow Rereading Same Barcode】**

99900156

【Allow Rereading Same Barcode】

99900157

【Recalculate Timeout After Good Read】

✧ **Allow Rereading Same Barcode**

This allows the scanner to reread the same barcode that has been decoded in the previous session.

✧ **Disallow Rereading Same Barcode**

This protects against accidental rereads of the same barcode. If the barcode being scanned is identical with the one previously scanned, the decode session will suspend until a different barcode comes up.

✧ **Recalculate Timeout After Good Read**

The decode session timeout restarts after a good read.

99900032

【Exit Setup】

** 【Enter Setup】

Blink Mode

Blink Mode: The scanner automatically activates a decode session. The decode session continues until the barcode is decoded or the decode session timeout expires (100ms; non-programmable). When a decode session is completed, the scanner waits until the timeout between decodes expires (default: 1s, programmable) and then starts next session. The scanner continues to work in this pattern.

Pressing the trigger can also activate a decode session; holding down the trigger can suspend decode session.

Timeout between Decodes: This parameter sets the time period between the end of one decode session and the start of next session. It is programmable in 0.5s increments from 0s to 7.5s. The default timeout is 1s. To program this parameter, scan the **Timeout between Decodes** barcode and the numeric barcodes.

Note: Timeout between Decodes: 00-15, corresponding to 0s, 0.5s, 1s (default),, 7.5s, in 0.5s increments.

【Blink Mode】

【Timeout between Decodes】

Example: Set the Timeout between Decodes to 5s (level 10)

1. Scan the **Enter Setup** barcode.
2. Scan the **Timeout between Decodes** barcode.
3. Scan the numeric barcodes "1" and "0" . (See the "**Digit Barcodes**" section in Appendix)
4. Scan the **Exit Setup** barcode.

【Exit Setup】

99900031

** 【Enter Setup】

Sense Mode

Sense Mode: The scanner activates a decode session every time when it detects a change in ambient illumination (excluding the situation when change is detected before the timeout between decodes expires). Decode session continues until the barcode is decoded or the decode session timeout expires.

Pressing the trigger can also activate a decode session. Holding down the trigger can suspend decode session. Same barcode cannot be reread before the timeout between decodes (same barcode) expires.

99900113

【Sense Mode】

Decode Session Timeout: This parameter sets the maximum time decode session continues during a scan attempt. The default timeout is 15s. To program this parameter, scan the **Decode Session Timeout** barcode and the numeric barcodes.

Timeout between Decodes: This parameter sets the time period between the end of one decode session and the start of next session. It is programmable in 0.5s increments from 0s to 7.5s. The default timeout is 1s. To program this parameter, scan the **Timeout between Decodes** barcode and the numeric barcodes.

Note: Decode Session Timeout: 01-15, corresponding to 1s, 2s, ..., 15s (default), in 1s increments; **00**: infinite.

Timeout between Decodes: 00-15, corresponding to 0s, 0.5s, 1s (default), ..., 7.5s, in 0.5s increments.

99900150

【Decode Session Timeout】

99900151

【Timeout between Decodes】

99900032

【Exit Setup】

** 【Enter Setup】

Sensitivity specifies the degree of acuteness of the scanner's response to changes in ambient illumination. The higher the sensitivity, the lower requirement in illumination change to trigger the scanner. You can select an appropriate degree of sensitivity that fits the ambient environment. By default, High Sensitivity is enabled.

** 【High Sensitivity】

【Low Sensitivity】

【Medium Sensitivity】

【Custom Sensitivity】

It is recommended not to set the custom sensitivity when one of the other three options can meet your needs.

Note: Sensitivity: 00-0F; the smaller the number, the higher the sensitivity.

Example: Set the sensitivity to level 5

1. Scan the **Enter Setup** barcode.
2. Scan the **Custom Sensitivity** barcode.
3. Scan the numeric barcodes "0" and "5". (See the "**Digit Barcodes**" section in Appendix)
4. Scan the **Exit Setup** barcode.

【Exit Setup】

99900031

** **【Enter Setup】**

Timeout between Decodes (Same Barcode): This parameter sets the minimum time between decodes for the same barcode. It protects against accidental rereads of the same barcode. It is programmable in 0.1s increments from 0s to 12s. If you want to stop the scanner from rereading the same barcode, set this parameter to 127. The default timeout is 1.6s. To program this parameter, scan the **Timeout between Decodes (Same Barcode)** barcode, the numeric barcode(s) and the **Save** barcode.

99900167

【Timeout between Decodes (Same Barcode)】

Note: Timeout between Decodes (Same Barcode): 0-120, corresponding to 0s, 0.1s, ..., 1.6s (default), ..., 12s, in 0.1s increments; **127**: infinite.

Example: Set the timeout between decodes (same barcode) to 5s

1. Scan the **Enter Setup** barcode.
2. Scan the **Timeout between Decodes (Same Barcode)** barcode.
3. Scan the numeric barcodes "5" and "0". (See the "**Digit Barcodes**" section in Appendix)
4. Scan the **Save** barcode. (See the "**Save/Cancel Barcodes**" section in Appendix)
5. Scan the **Exit Setup** barcode.

99900032

【Exit Setup】

** 【Enter Setup】

Continuous Mode

Continuous Mode: The scanner automatically activates decode sessions one after another. The decode session continues until the barcode is decoded. For a good read, the scanner waits until the timeout between decodes expires and then starts next session. For a bad read, the scanner continues to decode the barcode until it is decoded. Same barcode cannot be reread before the timeout between decodes (same barcode) expires.

Holding down the trigger can also activate the scanner to decode continuously, but with no intervals (i.e. timeout between decodes will be ignored).

【Continuous Mode】

【Exit Setup】

99900031

**** 【Enter Setup】**

Timeout between Decodes: This parameter sets the time period between the end of one decode session and the start of next session. It is programmable in 0.5s increments from 0s to 7.5s. The default timeout is 1s. To program this parameter, scan the **Timeout between Decodes** barcode and the numeric barcodes.

Note: Timeout between Decodes: 00-15, corresponding to 0s, 0.5s, 1s (default), ..., 7.5s, in 0.5s increments.

99900151

【Timeout between Decodes】

Timeout between Decodes (Same Barcode): This parameter sets the minimum time between decodes for the same barcode. It protects against accidental rereads of the same barcode. It is programmable in 0.1s increments from 0s to 12s. If you want to stop the scanner from rereading the same barcode, set this parameter to 127. The default timeout is 1.6s. To program this parameter, scan the **Timeout between Decodes (Same Barcode)** barcode, the numeric barcodes and the **Save** barcode.

Note: Timeout between Decodes (Same Barcode): 0-120, corresponding to 0s, 0.1s, ..., 1.6s (default), ..., 12s, in 0.1s increments; **127**: infinite.

99900167

【Timeout between Decodes (Same Barcode)】

Example: Set the timeout between decodes (same barcode) to 5s:

1. Scan the **Enter Setup** barcode.
2. Scan the **Timeout between Decodes (Same Barcode)** barcode.
3. Scan the numeric barcodes "5" and "0". (See the "**Digit Barcodes**" section in Appendix)
4. Scan the **Save** barcode. (See the "**Save/Cancel Barcodes**" section in Appendix)
5. Scan the **Exit Setup** barcode.

99900032

【Exit Setup】

** 【Enter Setup】

Delayed Sense Mode

Delayed Sense Mode: The scanner automatically activates a decode session when it detects a change in ambient illumination. The decode session continues until the barcode is decoded or the decode session timeout expires. When a decode session is completed, the scanner waits 200ms and then starts to monitor ambient environment until it detects a change to trigger next decode session. Same barcode cannot be reread before the timeout between decodes (same barcode) expires.

【Delayed Sense Mode】

Decode Session Timeout: This parameter sets the maximum time decode session continues during a scan attempt. To program this parameter, scan the **Decode Session Timeout** barcode and the numeric barcodes.

Timeout between Decodes (Same Barcode): This parameter sets the minimum time between decodes for the same barcode. It protects against accidental rereads of the same barcode. It is programmable in 0.2s increments from 0s to 3s. To program this parameter, scan the **Timeout between Decodes (Same Barcode)** barcode and the numeric barcodes.

Note: Decode Session Timeout: 01-15, corresponding to 2s, 4s, ..., 30s, in 2s increments; **00**: infinite.

Timeout between Decodes (Same Barcode): 00-15, corresponding to 0s, 0.2s, ..., 3s, in 0.2s increments.

【Decode Session Timeout】

【Timeout between Decodes (Same Barcode)】

【Exit Setup】

99900031

** 【Enter Setup】

Command Trigger Mode

Command Trigger Mode: The scanner activates a decode session when receiving the command string of “\$\$\$#99900035;%%” or scanning the **Start Trigger Simulation** barcode. The decode session continues until the barcode is decoded, or the scanner receives the command string of “\$\$\$#99900036;%%” or scans the **Stop Trigger Simulation** barcode.

If the scanner receives the command string of “\$\$\$#99900036;%%” or scans the **Stop Trigger Simulation** barcode during a decode session, it will stop the decode session and send a 2-character message (e.g., 0A or 0X) to the host device to indicate decoding failure.

99900116

【Command Trigger Mode】

99900035

【Start Trigger Simulation】

99900036

【Stop Trigger Simulation】

You can define a no read message to be sent to the host device when the scanner in the Command Trigger mode fails to decode a barcode.

99904200

【Define a No Read Message】

99900032

【Exit Setup】

** 【Enter Setup】

Hands-free Scanning (Hardware Version: V1.3 or higher)

Inserting the scanner in the stand enables the scanner to switch from its current scan mode to the Sense mode. The red LED on the scanner illuminates to indicate that the Sense mode is enabled. And the scanner is ready for hands-free scanning. When the scanner is removed from the stand, it operates in its previous scan mode. The red LED extinguishes.

Manual-Sense Mode Switch (Hardware Version: V1.3 or higher)

If the Manual-Sense Mode Switch is enabled, holding down the trigger for a certain period of time (decode session timeout + wait time) can switch the scanner currently in the Manual mode to the Sense mode. The scanner beeps to indicate that the Sense mode is enabled. To revert back to the Manual mode, simply press the trigger.

Scan the appropriate barcode below to enable or disable this feature.

** 【Disable Manual-Sense Mode Switch】

【Enable Manual-Sense Mode Switch】

Trigger-press duration is the sum of decode session timeout and wait time.

For the details about decode session timeout, refer to the “**Manual Mode**” section in Chapter 2.

Wait Time: 00-07, corresponding to 0-7s, in 1s increments. Default: 3s

【Wait Time】

Example: Set the wait time to 5s

1. Scan the **Enter Setup** barcode.
2. Scan the **Wait Time** barcode.

【Exit Setup】

99900031

**** 【Enter Setup】**

3. Scan the numeric barcodes “0” and “5”. (See the “Digit Barcodes” section in Appendix)
4. Scan the **Exit Setup** barcode.

Security Setup

This parameter specifies the number of times to decode a barcode during a scan attempt. The higher the security level, the lower the error rate and decoding efficiency. By default, security is set to be level 1.

Chapter 4 Communication Settings

RS-232 Interface

Baud Rate

When the scanner is connected to the Host via serial port, you need to set communication parameters (including baud rate, parity check, data bit and stop bit) to match the host device.

Baud rate is the number of bits of data transmitted per second. Set the scanner's baud rate to match the Host requirements. Otherwise, data may not reach the Host or may reach it in distorted form. The default baud rate is 9600.

Emulate ALT+Keypad

This feature allows any ASCII character (0x00 - 0xFF) to be sent over the numeric keypad no matter which keyboard type is selected. Since sending a character involves multiple keystroke emulations, this method appears less efficient.

The following options are available:

- **Disable:** No ASCII character is sent in the ALT+Keypad way.
- **Mode 1:** ASCII characters not supported by the selected keyboard type but falling into 0x20~0xFF are sent in the ALT+Keypad way.
- **Mode 2:** ASCII characters falling into 0x20~0xFF are sent in the ALT+Keypad way.
- **Mode 3:** All ASCII characters (0x00~0xFF) are sent in the ALT+Keypad way.

Note: In the event of a conflict between **Function Key Mapping** and **Mode 3, Function Key Mapping** shall govern.

** 【Disable】

【Mode 1】

【Mode 2】

【Mode 3】

Example: Supposing US keyboard is selected, barcode data "ADF" (65/208/70) is sent as below:

(1) **Mode 1** is enabled:

"A" -- Keystroke "A"

"D" -- "ALT Make" + "208" + "ALT Break"

"F" -- Keystroke "F"

(2) **Mode 3** is enabled:

"A" -- "ALT Make" + "065" + "ALT Break"

【Exit Setup】

** 【Enter Setup】

“Ð” -- “ALT Make” + “208” + “ALT Break”

“F” -- “ALT Make” + “070” + “ALT Break”

Function Key Mapping

When Function Key Mapping is enabled, function characters (0x00 - 0x1F) are sent as ASCII sequences over the keypad.
For more information, see **ASCII Function Key Mapping Table** in Appendix.

【Enable Function Key Mapping】

** 【Disable Function Key Mapping】

Example: Barcode data 0x16

 T	Enable Function Key Mapping	Ctrl+V
	Disable Function Key Mapping	F1

【Exit Setup】

99900031

**** 【Enter Setup】**

Emulate Numeric Keypad

When this feature is disabled, sending barcode data is emulated as keystroke(s) on main keyboard.

To enable this feature, scan the Emulate Numeric Keypad barcode. Sending a number (0-9) is emulated as keystroke(s) on numeric keypad, whereas sending other character like "+", "_", "*", "/" and "." is still emulated as keystrokes on main keyboard.

HID-POS

Introduction

The HID-POS interface is recommended for new application programs. It can send up to 56 characters in a single USB report and appears more efficient than keyboard emulation.

Features:

- ✧ HID based, no custom driver required.
- ✧ Way more efficient in communication than keyboard emulation and traditional RS-232 interface.

Note: HID-POS does not require a custom driver. However, a HID interface on Windows 98 does. All HID interfaces employ standard driver provided by the operating system. Use defaults when installing the driver.

99902302

【HID-POS】

Acquire Scanned Data

After a barcode is decoded, the scanner sends an input report as below:

Byte	Bit							
	7	6	5	4	3	2	1	0
0	Report ID = 0x02							
1	Barcode Length							
2-57	Decoded Data (1-56)							
58-61	Reserved (1-4)							
62	0x00							
63	-	-	-	-	-	-	-	Decode Data Continued

99900032

Chapter 5 Prefix & Suffix

Introduction

After a successful barcode reading, a string containing numbers, letters or symbols will be returned.

In real applications, barcode data may be found insufficient for your needs. You may wish to include additional information such as barcode type, data acquisition time or delimiter in data being scanned.

Adding extra information to printed barcodes does not seem like a sensible solution since that will increase the barcode size and make them inflexible. Instead, we come up with the idea of appending prefix and suffix to the data without making any change to barcodes. We will show you how to conduct the configuration in the following sections.

Note: Customized data: <Prefix> <Data><Suffix><Terminating Character>

Prefix Sequence

By default, the **Code ID+Custom+AIM ID** option is enabled.

** 【Code ID+Custom+AIM ID】

【Custom+Code ID+AIM ID】

【Exit Setup】

99900031

** **【Enter Setup】**

Custom Prefix

Enable/Disable Custom Prefix

If custom prefix is enabled, you are allowed to append to the data a user-defined prefix that cannot exceed 11 characters. By default, custom prefix is disabled.

For example, if barcode data is “123” and custom prefix is “AB”, the Host will receive “AB123”.

99904020

** **【Disable Custom Prefix】**

99904021

【Enable Custom Prefix】

Set Custom Prefix

To set a custom prefix, scan the **Set Custom Prefix** barcode, the numeric barcodes that represent the hexadecimal value of desired prefix(es) and the **Save** barcode.

Note: A custom prefix cannot exceed 11 characters.

99904022

【Set Custom Prefix】

Example: Set the custom prefix to “CODE” (its hexadecimal value is 0x43/0x4F/0x44/0x45)

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Custom Prefix** barcode.
3. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Enable Custom Prefix** barcode.
6. Scan the **Exit Setup** barcode.

99900032

【Exit Setup】

** 【Enter Setup】

AIM ID Prefix

AIM (Automatic Identification Manufacturers) ID defines symbology identifier (For the details, see the “**AIM ID Table**” section in Appendix). If AIM ID prefix is enabled, the scanner will add the symbology identifier before the scanned data after decoding. By default, AIM ID prefix is disabled.

** 【Disable AIM ID Prefix】

【Enable AIM ID Prefix】

Code ID Prefix

Code ID can also be used to identify barcode type. Unlike AIM ID, Code ID is user programmable. To learn how to program it, see the “**Set Code ID**” sections in Chapter 6. For the information of default Code ID, see the “**Code ID Table**” section in Appendix. By default, Code ID prefix is disabled.

** 【Disable Code ID Prefix】

【Restore Default Code IDs】

【Enable Code ID Prefix】

【Exit Setup】

99900031

** **【Enter Setup】**

Custom Suffix

Enable/Disable Custom Suffix

If custom suffix is enabled, you are allowed to append to the data a user-defined suffix that cannot exceed 11 characters. By default, custom suffix is disabled.

For example, if barcode data is “123” and custom suffix is “AB”, the Host will receive “123AB”.

99904100

** **【Disable Custom Suffix】**

99904101

【Enable Custom Suffix】

Set Custom Suffix

To set a custom suffix, scan the **Set Custom Suffix** barcode, the numeric barcodes that represent the hexadecimal value of desired suffix(es) and the **Save** barcode.

Note: A custom suffix cannot exceed 11 characters.

99904102

【Set Custom Suffix】

Example: Set the custom suffix to “AGE” (its hexadecimal value is 0x41/0x47/0x45)

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Custom Suffix** barcode.
3. Scan the numeric barcodes “4”“1”“4”“7”“4” and “5”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Enable Custom Suffix** barcode.
6. Scan the **Exit Setup** barcode.

99900032

【Exit Setup】

** 【Enter Setup】

Terminating Character Suffix

Enable/Disable Terminating Character Suffix

A terminating character such as carriage return (CR) or carriage return/line feed pair (CRLF) can only be used to mark the end of data, which means nothing can be added after it. By default, terminating character suffix is enabled.

【Disable Terminating Character Suffix】

** 【Enable Terminating Character Suffix】

【Exit Setup】

99900031

** **【Enter Setup】**

Set Terminating Character Suffix

To set a terminating character suffix, scan the **Set Terminating Character Suffix** barcode, the numeric barcodes that represent the hexadecimal value of desired terminating character(s) and the **Save** barcode. By default, terminating character 0x0D,0x0A is enabled.

99904112

【Set Terminating Character Suffix】

99904113

【Terminating Character 0x0D】

99904114

【Terminating Character 0x0D,0x0A】

Example: Set the terminating character to “0x0A”

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Terminating Character Suffix** barcode.
3. Scan the numeric barcodes “0” and “A”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Exit Setup** barcode.

If terminating character suffix is enabled, after finishing the above configuration an LF character will be added after scanned data.

Note: Under the Windows operating system, you can quickly set terminating character suffix to 0x0D or 0x0D,0x0A by scanning the appropriate barcode above.

Chapter 6 Symbologies

Introduction

Every symbology (barcode type) has its own unique attributes. This chapter provides programming barcodes for configuring the scanner so that it can identify various barcode symbologies. It is recommended to disable those that are rarely used to increase the efficiency of the scanner.

99900032

【Exit Setup】

99900031

Code 128

Restore Default Settings

Scan the barcode below to restore all parameters in Code 128 configuration to the factory default settings. To find the related default settings, see the “**Default Parameters Table**” section in Appendix.

99910000

【Restore the Default Settings of Code 128】

Enable/Disable Code 128

Code 128 is enabled by default.

99910002

** **【Enable Code 128】**

99910001

【Disable Code 128】

Note: If the scanner fails to identify Code 128 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable Code 128** barcode.

99900032

【Exit Setup】

** **【Enter Setup】**

Set Code ID

Code ID can only consist of one or two English letters. See the “**Code ID Table**” section in Appendix to find the default Code ID for Code 128.

To set the Code ID, scan the **Set Code ID for Code 128** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired ID and the **Save** barcode.

【Set Code ID for Code 128】

Example: Set the Code ID of Code 128 to “p” (its hexadecimal value is 0x70)

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Code ID for Code 128** barcode.
3. Scan the numeric barcodes “7” and “0”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Exit Setup** barcode.

【Exit Setup】

99900031

**** 【Enter Setup】**

Set Length Range for Code 128

The scanner can be configured to only decode Code 128 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

If minimum length is set to be greater than maximum length, the scanner only decodes Code 128 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Code 128 barcodes with that length are to be decoded.

99910003

【Set the Minimum Length】

99910004

【Set the Maximum Length】

Example: Set the scanner to decode Code128 barcodes containing between 8 and 12 characters

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode “8”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcodes “1” and “2”.
7. Scan the **Save** barcode.
8. Scan the **Exit Setup** barcode.

99900032

【Exit Setup】

** 【Enter Setup】

UCC/EAN-128

Restore Default Settings

Scan the barcode below to restore all parameters in UCC/EAN-128 configuration to the factory default settings. To find the related default settings, see the “**Default Parameters Table**” section in Appendix.

【Restore the Default Settings of UCC/EAN-128】

Enable/Disable UCC/EAN-128

UCC/EAN-128 is enabled by default.

** 【Enable UCC/EAN-128】

【Disable UCC/EAN-128】

Note: If the scanner fails to identify UCC/EAN-128 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable UCC/EAN-128** barcode.

【Exit Setup】

** **【Enter Setup】**

Set Code ID

Code ID can only consist of one or two English letters. See the “**Code ID Table**” section in Appendix to find the default Code ID for UCC/EAN-128.

To set the Code ID, scan the **Set Code ID for UCC/EAN-128** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired ID and the **Save** barcode.

【Set Code ID for UCC/EAN-128】

Example: Set the Code ID of UCC/EAN-128 to “p” (its hexadecimal value is 0x70)

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Code ID for UCC/EAN-128** barcode.
3. Scan the numeric barcodes “7” and “0”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Exit Setup** barcode.

【Exit Setup】

** 【Enter Setup】

Set Length Range for UCC/EAN-128

The scanner can be configured to only decode UCC/EAN-128 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

If minimum length is set to be greater than maximum length, the scanner only decodes UCC/EAN-128 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only UCC/EAN-128 barcodes with that length are to be decoded.

【Set the Minimum Length】

【Set the Maximum Length】

Example: Set the scanner to decode UCC/EAN-128 barcodes containing between 8 and 12 characters

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode "8". (See the "**Digit Barcodes**" section in Appendix)
4. Scan the **Save** barcode. (See the "**Save/Cancel Barcodes**" section in Appendix)
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcodes "1" and "2".
7. Scan the **Save** barcode.
8. Scan the **Exit Setup** barcode.

Interleaved 2 of 5

Restore Default Settings

Scan the barcode below to restore all parameters in Interleaved 2 of 5 configuration to the factory default settings. To find the related default settings, see the “**Default Parameters Table**” section in Appendix.

【Restore the Default Settings of Interleaved 2 of 5】

Enable/Disable Interleaved 2 of 5

Interleaved 2 of 5 is enabled by default.

** 【Enable Interleaved 2 of 5】

【Disable Interleaved 2 of 5】

Note: If the scanner fails to identify Interleaved 2 of 5 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable Interleaved 2 of 5** barcode.

【Exit Setup】

99900031

** **【Enter Setup】**

Set Code ID

Code ID can only consist of one or two English letters. See the “**Code ID Table**” section in Appendix to find the default Code ID for Interleaved 2 of 5.

To set the Code ID, scan the **Set Code ID for Interleaved 2 of 5** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired ID and the **Save** barcode.

99911210

【Set Code ID for Interleaved 2 of 5】

Example: Set the Code ID of Interleaved 2 of 5 to “p” (its hexadecimal value is 0x70)

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Code ID for Interleaved 2 of 5** barcode.
3. Scan the numeric barcodes “7” and “0”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Exit Setup** barcode.

99900032

【Exit Setup】

** 【Enter Setup】

Check Digit Verification

A check digit is optional for Interleaved 2 of 5 and can be added as the last digit. It is a calculated value used to verify the integrity of the data. By default, the scanner does not transmit Interleaved 2 of 5 check digit after verification.

- ✧ **Disable:** The scanner transmits Interleaved 2 of 5 barcodes as is.
- ✧ **Do Not Transmit Check Digit After Verification:** The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted except the last digit, whereas those failing it will not be transmitted.
- ✧ **Transmit Check Digit After Verification:** The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted, whereas those failing it will not be transmitted.

【Disable】

** 【Do Not Transmit Check Digit After Verification】

【Transmit Check Digit After Verification】

Note: If the **Do Not Transmit Check Digit After Verification** option is enabled, Interleaved 2 of 5 barcodes with a length that is less than the configured minimum length after having the check digit excluded will not be decoded. (For example, when the **Do Not Transmit Check Digit After Verification** option is enabled and the minimum length is set to 6, Interleaved 2 of 5 barcodes with a total length of 6 characters including the check digit cannot be read.)

【Exit Setup】

99900031

** **【Enter Setup】**

Set Length Range for Interleaved 2 of 5

The scanner can be configured to only decode Interleaved 2 of 5 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

If minimum length is set to be greater than maximum length, the scanner only decodes Interleaved 2 of 5 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Interleaved 2 of 5 barcodes with that length are to be decoded.

99911206

【Set the Minimum Length】

99911207

【Set the Maximum Length】

Example: Set the scanner to decode Interleaved 2 of 5 barcodes containing between 8 and 12 characters

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode "8". (See the "**Digit Barcodes**" section in Appendix)
4. Scan the **Save** barcode. (See the "**Save/Cancel Barcodes**" section in Appendix)
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcodes "1" and "2".
7. Scan the **Save** barcode.
8. Scan the **Exit Setup** barcode.

ITF-6

ITF-6 is a special kind of Interleaved 2 of 5 with a length of 6 characters and the last character as the check character. By default, ITF-6 is disabled.

ITF-6 priority principle: For the Interleaved 2 of 5 barcodes with a length of 6 characters and the last character as the check character, the ITF-6 configurations shall take precedence over the Interleaved 2 of 5 settings.

99911300

【Restore the Default Settings of ITF-6】

99911302

** 【Disable ITF-6】

99911301

【Enable ITF-6 But Do Not Transmit Check Digit】

99911303

【Enable ITF-6 and Transmit Check Digit】

Note: An example of the ITF-6 priority principle: when ITF-6 is enabled and Interleaved 2 of 5 is disabled, the scanner only decodes Interleaved 2 of 5 barcodes with a length of 6 characters and the last character as the check character.

99900032

【Exit Setup】

** 【Enter Setup】

Set Code ID

Code ID can only consist of one or two English letters. See the “**Code ID Table**” section in Appendix to find the default Code ID for ITF-6.

To set the Code ID, scan the **Set Code ID for ITF-6** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired ID and the **Save** barcode.

【Set Code ID for ITF-6】

Example: Set the Code ID of ITF-6 to “p” (its hexadecimal value is 0x70)

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Code ID for ITF-6** barcode.
3. Scan the numeric barcodes “7” and “0”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Exit Setup** barcode.

【Exit Setup】

99900031

** 【Enter Setup】

ITF-14

ITF-14 is a special kind of Interleaved 2 of 5 with a length of 14 characters and the last character as the check character. By default, ITF-14 is disabled.

ITF-14 priority principle: For the Interleaved 2 of 5 barcodes with a length of 14 characters and the last character as the check character, the ITF-14 configurations shall take precedence over the Interleaved 2 of 5 settings.

99911400

【Restore the Default Settings of ITF-14】

99911402

【Enable ITF-14 But Do Not Transmit Check Digit】

99911401

** 【Disable ITF-14】

99911403

【Enable ITF-14 and Transmit Check Digit】

Note: An example of the ITF-14 priority principle: when ITF-14 is enabled and Interleaved 2 of 5 is disabled, the scanner only decodes Interleaved 2 of 5 barcodes with a length of 14 characters and the last character as the check character.

In the events that the ITF-14 configuration clashes with the Deutsche14 settings, the former shall prevail.

99900032

【Exit Setup】

** 【Enter Setup】

Set Code ID

Code ID can only consist of one or two English letters. See the “**Code ID Table**” section in Appendix to find the default Code ID for ITF-14.

To set the Code ID, scan the **Set Code ID for ITF-14** barcode, the numeric barcodes for the hexadecimal value of a desired ID and the **Save** barcode.

【Set Code ID for ITF-14】

Example: Set the Code ID of ITF-14 to “p” (its hexadecimal value is 0x70)

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Code ID for ITF-14** barcode.
3. Scan the numeric barcodes “7” and “0”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Exit Setup** barcode.

** 【Transmit Check Digit After Verification】

【Do Not Transmit Check Digit After Verification】

Note: If the **Do Not Transmit Check Digit After Verification** option is enabled, Industrial 25 barcodes with a length that is less than the configured minimum length after having the check digit excluded will not be decoded. (For example, when the **Do Not Transmit Check Digit After Verification** option is enabled and the minimum length is set to 4, Industrial 25 barcodes with a total length of 4 characters including the check digit cannot be read.)

【Exit Setup】

** 【Enter Setup】

Set Length Range for Industrial 25

The scanner can be configured to only decode Industrial 25 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

If minimum length is set to be greater than maximum length, the scanner only decodes Industrial 25 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Industrial 25 barcodes with that length are to be decoded.

【Set the Minimum Length】

【Set the Maximum Length】

Example: Set the scanner to decode Industrial 25 barcodes containing between 8 and 12 characters

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode “8”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcodes “1” and “2”.
7. Scan the **Save** barcode.
8. Scan the **Exit Setup** barcode.

【Exit Setup】

** **【Enter Setup】**

Standard 25

Restore Default Settings

Scan the barcode below to restore all parameters in Standard 25 configuration to the factory default settings. To find the related default settings, see the “**Default Parameters Table**” section in Appendix.

99912200

【Restore the Default Settings of Standard 25】

Enable/Disable Standard 25

Standard 25 is enabled by default.

99912202

** **【Enable Standard 25】**

99912201

【Disable Standard 25】

Note: If the scanner fails to identify Standard 25 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable Standard 25** barcode.

99900032

【Exit Setup】

** 【Enter Setup】

Set Code ID

Code ID can only consist of one or two English letters. See the “**Code ID Table**” section in Appendix to find the default Code ID for Standard 25.

To set the Code ID, scan the **Set Code ID for Standard 25** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired ID and the **Save** barcode.

【Set Code ID for Standard 25】

Example: Set the Code ID of Standard 25 to “p” (its hexadecimal value is 0x70)

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Code ID for Standard 25** barcode.
3. Scan the numeric barcodes “7” and “0”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Exit Setup** barcode.

【Exit Setup】

99900031

** 【Enter Setup】

Check Digit Verification

A check digit is optional for Standard 25 and can be added as the last digit. It is a calculated value used to verify the integrity of the data. By default, check digit verification is disabled.

- ✧ **Disable:** The scanner transmits Standard 25 barcodes as is.
- ✧ **Do Not Transmit Check Digit After Verification:** The scanner checks the integrity of all Standard 25 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted except the last digit, whereas those failing it will not be transmitted.
- ✧ **Transmit Check Digit After Verification:** The scanner checks the integrity of all Standard 25 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted, whereas those failing it will not be transmitted.

99912203

** 【Disable】

99912204

【Transmit Check Digit After Verification】

99912205

【Do Not Transmit Check Digit After Verification】

Note: If the **Do Not Transmit Check Digit After Verification** option is enabled, Standard 25 barcodes with a length that is less than the configured minimum length after having the check digit excluded will not be decoded. (For example, when the **Do Not Transmit Check Digit After Verification** option is enabled and the minimum length is set to 4, Standard 25 barcodes with a total length of 4 characters including the check digit cannot be read.)

99900032

Set Code ID

Code ID can only consist of one or two English letters. See the “**Code ID Table**” section in Appendix to find the default Code ID for MSI-Plessey.

To set the Code ID, scan the **Set Code ID for MSI-Plessey** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired ID and the **Save** barcode.

【Set Code ID for MSI-Plessey】

Example: Set the Code ID of MSI-Plessey to “p” (its hexadecimal value is 0x70)

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Code ID for MSI-Plessey** barcode.
3. Scan the numeric barcodes “7” and “0”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Exit Setup** barcode.

【Exit Setup】

** 【Enter Setup】

Check Digit Verification

Check digits are optional for MSI-Plessey and can be added as the last one or two digits, which are calculated values used to verify the integrity of the data. By default, the scanner does not transmit check digit after verification (One Check Digit, MOD10).

If the **Disable** option is enabled, the scanner transmits MSI-Plessey barcodes as is.

【Disable】

** 【One Check Digit, MOD10】

【Two Check Digits, MOD10/MOD10】

【Two Check Digits, MOD10/MOD11】

** 【Do Not Transmit Check Digit】

【Transmit Check Digit】

Note: If you select a check digit algorithm and the **Do Not Transmit Check Digit** option, MSI-Plessey barcodes with a length that is less than the configured minimum length after having the check digit(s) excluded will not be decoded. (For example, when the **One Check Digit, MOD10** and **Do Not Transmit Check Digit** options are enabled and the minimum length is set to 4, MSI-Plessey barcodes with a total length of 4 characters including the check digit cannot be read.)

【Exit Setup】

** **【Enter Setup】**

Set Length Range for MSI-Plessey

The scanner can be configured to only decode MSI-Plessey barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

If minimum length is set to be greater than maximum length, the scanner only decodes MSI-Plessey barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only MSI-Plessey barcodes with that length are to be decoded.

【Set the Minimum Length】

【Set the Maximum Length】

Example: Set the scanner to decode MSI-Plessey barcodes containing between 8 and 12 characters.

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode "8". (See the "**Digit Barcodes**" section in Appendix)
4. Scan the **Save** barcode. (See the "**Save/Cancel Barcodes**" section in Appendix)
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcode "1".
7. Scan the numeric barcode "2".
8. Scan the **Save** barcode.
9. Scan the **Exit Setup** barcode.

【Exit Setup】

** 【Enter Setup】

GS1 Databar

Restore Default Settings

Scan the barcode below to restore all parameters in GS1 Databar configuration to the factory default settings. To find the related default settings, see the “**Default Parameters Table**” section in Appendix.

【Restore the Default Settings of GS1 Databar】

Enable/Disable GS1 Databar

GS1 Databar is enabled by default.

** 【Enable GS1 Databar】

【Disable GS1 Databar】

Note: If the scanner fails to identify GS1 Databar barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable GS1 Databar** barcode.

【Exit Setup】

** **【Enter Setup】**

Set Code ID

Code ID can only consist of one or two English letters. See the “**Code ID Table**” section in Appendix to find the default Code ID for GS1 Databar.

To set the Code ID, scan the **Set Code ID for GS1 Databar** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired ID and the **Save** barcode.

【Set Code ID for GS1 Databar】

Example: Set the Code ID of GS1 Databar to “p” (its hexadecimal value is 0x70)

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Code ID for GS1 Databar** barcode.
3. Scan the numeric barcodes “7” and “0”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Exit Setup** barcode.

【Exit Setup】

99900031

**** 【Enter Setup】**

PDF417

Restore Default Settings

Scan the barcode below to restore all parameters in PDF417 configuration to the factory default settings. To find the related default settings, see the “**Default Parameters Table**” section in Appendix.

99920100

【Restore the Default Settings of PDF417】

Enable/Disable PDF417

PDF417 is enabled by default.

99920102

**** 【Enable PDF417】**

99920101

【Disable PDF417】

Note:

- ✧ If the scanner fails to identify PDF417 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable PDF417** barcode.
- ✧ Maximum length supported: 2710 bytes.

99900032

【Exit Setup】

** **【Enter Setup】**

Set Code ID

Code ID can only consist of one or two English letters. See the “**Code ID Table**” section in Appendix to find the default Code ID for PDF417.

To set the Code ID, scan the **Set Code ID for PDF417** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired ID and the **Save** barcode.

【Set Code ID for PDF417】

Example: Set the Code ID of PDF417 to “p” (its hexadecimal value is 0x70)

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Code ID for PDF417** barcode.
3. Scan the numeric barcodes “7” and “0”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Exit Setup** barcode.

【Exit Setup】

** 【Enter Setup】

Set Length Range for PDF417

The scanner can be configured to only decode PDF417 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

Minimum length is not allowed to be greater than maximum length. If you only want to read PDF417 barcodes with a specific length, set both minimum and maximum lengths to be that desired length.

【Set the Minimum Length】

【Set the Maximum Length】

Example: Set the scanner to decode PDF417 barcodes containing between 8 and 12 bytes.

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode “8”. (See the “**Digit Barcodes**” section in Appendix)
4. Scan the **Save** barcode. (See the “**Save/Cancel Barcodes**” section in Appendix)
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcode “1”.
7. Scan the numeric barcode “2”.
8. Scan the **Save** barcode.
9. Scan the **Exit Setup** barcode.

【Exit Setup】

99900031

** 【Enter Setup】

Sample Barcodes

When reading a PDF417 barcode, you need to scan it horizontally from the top/bottom row of the barcode to the bottom/top.

Apart from the influence of barcode density, consecutive horizontal scans are essential for accomplishing a good read. The greater the row height is, the easier it is to decode a PDF417 barcode.

Listed below are some sample barcodes (15 mil).

Chapter 7 Data Formatter

You may use the Data Formatter to modify the scanner's output. For example, you can use the Data Formatter to insert characters at certain points in barcode data or to suppress/ replace/ send certain characters in barcode data as it is scanned.

Normally, when you scan a barcode, it gets outputted automatically; however, when you create a format, you must use a "send" command (see the "Send Commands " section) within the format programming to output data.

There are two methods to program a data format: Barcode programming and command programming.

Programming with Barcodes

Introduction

Data format is used to edit barcode data only. You can program up to four data formats, i.e. Format_0, Format_1, Format_2 and Format_3. When you create a data format, you must specify the application scope of your data format (such as barcode type and data length) and include formatter commands. When scanned data does not match your data format requirements, you will hear the non-match error beep (if the non-match error beep is ON).

Add a Data Format

The following explains how to program a data format by scanning the specific barcodes. Scanning any irrelevant barcode or failing to follow the setting procedure will result in programming failure. To find the alphanumeric barcodes needed to create a data format, see the "Digit Barcodes" section in Appendix

Step 1: Scan the **Add Data Format** barcode.

【Add Data Format】

Step 2: Select data format.

Scan a numeric barcode "0" or "1" or "2" or "3" to set this to Format_0 or Format_1 or Format_2 or Format_3.

【Exit Setup】

** 【Enter Setup】

Step 3: Select formatter command type.

Specify what type of formatter commands will be used. Scan a numeric barcode “1” or “2” or “3” to select formatter command type 1 or formatter command type 2 or formatter command type 3. (See the “Formatter Command Types” section)

Step 4: Set Code ID.

Refer to the “Code ID Table” in Appendix and find the symbology to which you want to apply the data format. Locate the hexadecimal value for the Code ID in the “ASCII Table” in Appendix and scan the two numeric barcodes that represent the hexadecimal value. If you wish to create a data format for all symbologies, scan “F” twice. For example, when a symbology’s code ID is A (hex value: 41), you should scan “4” and “1”.

Step 5: Set barcode data length

Specify what length (up to 9999 characters) of data will be acceptable for this symbology. Scan the four numeric barcodes that represent the data length. 9999 is a universal number, indicating all lengths. For example, 32 characters should be entered as 0032.

Step 6: Enter formatter command

Refer to the “Data Formatter Commands” section in this chapter. Scan the alphanumeric barcodes that represent the command you need to edit data. For example, when a command is F141, you should scan “F”, “1”, “4” and “1”. A command can contain up to 120 characters.

Step 7: Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix to save your data format.

Note: A data format configuration (Step 1 to Step 7) can only contain 128 alphanumeric characters at most and Step 1 to Step 5 takes up 8 of them.

Example: Program format_0 using formatter command type 3, all symbologies and all data lengths applicable, send all characters up to but not including “D” in barcode data, followed by a carriage return.

- | | |
|---|---|
| 1. Scan the Add Data Format barcode | Add a data format |
| 2. Scan the 0 barcode | Select format_0 |
| 3. Scan the 3 barcode | Select formatter command type 3 |
| 4. Scan the F barcode twice | All symbologies applicable |
| 5. Scan the 9 barcode four times | All data lengths applicable |
| 6. Scan the alphanumeric barcodes F, 3, 4, 4, 0 and D | Send all characters up to but not including “D” in barcode data, followed by a carriage return. |
| 7. Scan the Save barcode | Save the data format. |

【Exit Setup】

99900031

**** 【Enter Setup】**

Enable Data Format

After enabling the Data Formatter, you may select a data format you want to use by scanning the appropriate barcode below.

99904506

**** 【Format_0】**

99904507

【Format_1】

99904510

【Format_2】

99904511

【Format_3】

Change Data Format for a Single Scan

You can switch between data formats for a single scan. The next barcode is scanned using the data format selected here, then reverts to the format you have selected above. For example, you may have set your scanner to the data format you saved as Format_3. You can switch to Format_1 for a single trigger pull by scanning the **Single Scan – Format_1** barcode below. The next barcode that is scanned uses Format_1, then reverts back to Format_3.

Note: This setting will be lost by removing power from the scanner, or turning off/ rebooting the device.

99904512

【Single Scan – Format_0】

99904513

【Single Scan – Format_1】

99904514

【Single Scan – Format_2】

99904515

【Single Scan – Format_3】

99900032

【Exit Setup】

** 【Enter Setup】

Enable/Disable Data Formatter

When Data Formatter is disabled, the data format you have enabled becomes invalid.

** 【Disable Data Formatter】

You may wish to require the data to conform to a data format you have created. The following settings can be applied to your data format:

Enable Data Formatter, Required, Keep Prefix/Suffix: Scanned data that meets your data format requirements is modified accordingly and gets outputted along with prefixes and suffixes (if prefix and suffix are enabled). Any data that does not match your data format requirements generates an error beep (if Non-Match Error Beep is turned ON) and the data in that barcode is not transmitted.

Enable Data Formatter, Required, Drop Prefix/Suffix: Scanned data that meets your data format requirements is modified accordingly and gets outputted without prefixes and suffixes (even if prefix and suffix are enabled). Any data that does not match your data format requirements generates an error beep (if Non-Match Error Beep is turned ON) and the data in that barcode is not transmitted.

Enable Data Formatter, Not Required, Keep Prefix/Suffix: Scanned data that meets your data format requirements is modified accordingly and gets outputted along with prefixes and suffixes (if prefix and suffix are enabled). Barcode data that does not match your data format requirements is transmitted as read along with prefixes and suffixes (if prefix and suffix are enabled).

Enable Data Formatter, Not Required, Drop Prefix/Suffix: Scanned data that meets your data format requirements is modified accordingly and gets outputted without prefixes and suffixes (even if prefix and suffix are enabled). Barcode data that does not match your data format requirements is transmitted as read along with prefixes and suffixes (if prefix and suffix are enabled).

【Enable Data Formatter, Required, Keep Prefix/Suffix】

【Enable Data Formatter, Required, Drop Prefix/Suffix】

【Enable Data Formatter, Not Required, Keep Prefix/Suffix】

【Enable Data Formatter, Not Required, Drop Prefix/Suffix】

【Exit Setup】

99900031

** **【Enter Setup】**

Non-Match Error Beep

If Non-Match Error Beep is turned ON, the scanner generates an error beep when a barcode is encountered that does not match your required data format.

99904523

【Non-Match Error Beep OFF】

99904522

** **【Non-Match Error Beep ON】**

Clear Data Format

There are two methods to remove data format from your scanner:

Delete one data format: Scan the **Clear One** barcode, a numeric barcode (0-3) and the **Save** barcode. For example, to delete Format_2, you should scan the **Clear One** barcode, the **2** barcode and the **Save** barcode

Delete all data formats: Scan the **Clear All** barcode.

99904516

【Clear All】

99904517

【Clear One】

99900032

【Exit Setup】

** 【Enter Setup】

Programming with Serial Commands

A data format can also be created by serial commands sent from the host device. The maximum size of a command string is 128 (visible) characters. The syntax consists of the following elements:

Start of command: “(”, 1 char.

Data format: “0”~“3”, 1 char. “0”, “1”, “2” and “3” represent Format_0, Format_1, Format_2 and Format_3 respectively.

Formatter command type: “1”~“3”, 1 char. “1”, “2” and “3” represent type 1, type 2 and type 3 respectively.

Code ID: The hexadecimal value for the Code ID of the symbology to which you want to apply the data format, 1 char. “FF” indicates all symbologies.

Data length: The length of data that will be acceptable for this symbology, 4 chars. “9999” indicates all lengths. For example, 32 characters should be entered as 0032.

Formatter commands: The command string used to edit data, max. 120 chars. For more information, see the following sections.

End of command: “)))]”, 4 chars.

Note: A command string used to create a data format must conform to the syntax above. Returned message “S” indicates success; returned message “F” indicates failure.

Example: Program format_0 using formatter command type 3, all symbologies and all data lengths applicable, send all characters up to but not including “D” in barcode data, followed by a carriage return.

Command string: **(03FF9999F3440D)))]**

【Exit Setup】

** **【Enter Setup】**

Formatter Command Type

Formatter Command Type 1 (reserved)

Formatter Command Type 2 (reserved)

Formatter Command Type 3

Send Commands

F1 Send all characters

Syntax=F1xx (xx: The insert character's hex value)

Include in the output message all of the characters from the input message, starting from current cursor position, followed by an insert character.

F2 Send a number of characters

Syntax=F2nnxx (nn: The numeric value (00-99) for the number of characters; xx: The insert character's hex value)

Include in the output message a number of characters followed by an insert character. Start from the current cursor position and continue for "nn" characters or through the last character in the input message, followed by character "xx."

F2 Example: Send a number of characters

Send the first 10 characters from the barcode above, followed by a carriage return.

Command string: **F2100D**

F2 is the "Send a number of characters" command

10 is the number of characters to send

0D is the hex value for a CR

The data is output as: **1234567890**

<CR>

【Exit Setup】

** 【Enter Setup】

F3 Send all characters up to a particular character

Syntax=F3ssxx (ss: The particular character's hex value; xx: The insert character's hex value)

Include in the output message all characters from the input message, starting with the character at the current cursor position and continuing to, but not including, the particular character "ss," followed by character "xx." The cursor is moved forward to the "ss" character.

F3 Example: Send all characters up to a particular character

Using the barcode above, send all characters up to but not including "D," followed by a carriage return.

Command string: **F3440D**

F3 is the "Send all characters up to a particular character" command

44 is the hex value for a "D"

0D is the hex value for a CR

The data is output as: **1234567890ABC**
<CR>

E9 Send all but the last characters

Syntax=E9nn (nn: The numeric value (00-99) for the number of characters that will not be sent at the end of the message)

Include in the output message all but the last "nn" characters, starting from the current cursor position. The cursor is moved forward to one position past the last input message character included.

F4 Insert a character multiple times

Syntax=F4xxnn (xx: The insert character's hex value; nn: The numeric value (00-99) for the number of times it should be sent)

Send "xx" character "nn" times in the output message, leaving the cursor in the current position.

【Exit Setup】

** 【Enter Setup】

E9 and F4 Example: Send all but the last characters, followed by 2 tabs

Send all characters except for the last 8 from the barcode above, followed by 2 tabs.

Command string: **E908F40902**

E9 is the “Send all but the last characters” command

08 is the number of characters at the end to ignore

F4 is the “Insert a character multiple times” command

09 is the hex value for a horizontal tab

02 is the number of time the tab character is sent

The data is output as: **1234567890AB<tab><tab>**

B3 Insert symbology name

Insert the name of the barcode’s symbology in the output message, without moving the cursor.

B4 Insert barcode length

Insert the barcode’s length in the output message, without moving the cursor. The length is expressed as a numeric string and does not include leading zeros.

【Exit Setup】

** 【Enter Setup】

B3 and B4 Example: Insert the symbology name and length

Send the symbology name and length before the barcode data from the barcode above. Break up these insertions with spaces. End with a carriage return.

Command string: **B3F42001B4F42001F10D**

B3 is the "Insert symbology name" command

F4 is the "Insert a character multiple times" command

20 is the hex value for a space

01 is the number of time the space character is sent

B4 is the "Insert barcode length" command

F4 is the "Insert a character multiple times" command

20 is the hex value for a space

01 is the number of time the space character is sent

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **Code128 20 1234567890ABCDEFGHIJ**

<CR>

Move Commands

F5 Move the cursor forward a number of characters

Syntax=F5nn (nn: The numeric value (00-99) for the number of characters the cursor should be moved ahead)

Move the cursor ahead "nn" characters from current cursor position.

【Exit Setup】

** **【Enter Setup】**

F5 Example: Move the cursor forward and send the data

Move the cursor forward 3 characters, then send the rest of the barcode data from the barcode above. End with a carriage return.

Command string: **F503F10D**

F5 is the "Move the cursor forward a number of characters" command

03 is the number of characters to move the cursor

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **4567890ABCDEFGHIJ**

<CR>

F6 Move the cursor backward a number of characters

Syntax=F6nn (nn: The numeric value (00-99) for the number of characters the cursor should be moved back)

Move the cursor back "nn" characters from current cursor position.

F7 Move the cursor to the beginning

Syntax = F7

Move the cursor to the first character in the input message.

EA Move the cursor to the end

Syntax = EA

99900032

【Exit Setup】

**** 【Enter Setup】**

Move the cursor to the last character in the input message.

Search Commands

F8 Search forward for a character

Syntax = F8xx (xx: The search character's hex value)

Search the input message forward for "xx" character from the current cursor position, leaving the cursor pointing to the "xx" character.

F8 Example: Send barcode data that starts after a particular character

Search for the letter "D" in barcodes and send all the data that follows, including the "D". Using the barcode above:

Command string: **F844F10D**

F8 is the "Search forward for a character" command

44 is the hex value for "D"

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **DEFGHIJ**

<CR>

F9 Search backward for a character

Syntax = F9xx (xx: The search character's hex value)

Search the input message backward for "xx" character from the current cursor position, leaving the cursor pointing to the "xx" character.

【Exit Setup】

** 【Enter Setup】

B0 Search forward for a string

Syntax=B0nnnnS (nnnn: The string length (up to 9999); S: The ASCII hex value of each character in the string)

Search forward for "S" string from the current cursor position, leaving cursor pointing to "S" string. For example, B0000454657374 will search forward for the first occurrence of the 4-character string "Test."

B0 Example: Send barcode data that starts after a string of characters

Search for the letters "FGH" in barcodes and send all the data that follows, including "FGH." Using the barcode above:

Command string: **B00003464748F10D**

B0 is the "Search forward for a string" command

0003 is the string length (3 characters)

46 is the hex value for "F"

47 is the hex value for "G"

48 is the hex value for "H"

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **FGHIJ**

<CR>

B1 Search backward for a string

Syntax = B1nnnnS (nnnn: The string length (up to 9999); S: The ASCII hex value of each character in the string)

Search backward for "S" string from the current cursor position, leaving cursor pointing to "S" string. For example, B1000454657374 will search backward for the first occurrence of the 4-character string "Test."

【Exit Setup】

** **【Enter Setup】**

E6 Search forward for a non-matching character

Syntax=E6xx (xx: The search character's hex value)

Search the input message forward for the first non-"xx" character from the current cursor position, leaving the cursor pointing to the non-"xx" character.

E6 Example: Remove zeros at the beginning of barcode data

This example shows a barcode that has been zero filled. You may want to ignore the zeros and send all the data that follows. E6 searches forward for the first character that is not zero, then sends all the data after, followed by a carriage return. Using the barcode above:

Command string: **E630F10D**

E6 is the "Search forward for a non-matching character" command

30 is the hex value for 0

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **37692**

<CR>

E7 Search backward for a non-matching character

Syntax = E7xx (xx: The search character's hex value)

Search the input message backward for the first non-"xx" character from the current cursor position, leaving the cursor pointing to the non-"xx" character.

【Exit Setup】

** **【Enter Setup】**

Miscellaneous Commands

FB Suppress characters

Syntax = FBnnxxyy..zz (nn: The numeric value (00-15) for the number of suppressed characters; xxyy..zz: The hex value of the characters to be suppressed)

Suppress all occurrences of up to 15 different characters, starting at the current cursor position, as the cursor is advanced by other commands.

FB Example: Remove spaces in barcode data

This example shows a barcode that has spaces in the data. You may want to remove the spaces before sending the data. Using the barcode above:

Command string: **FB0120F10D**

FB is the “Suppress characters” command

01 is the number of the characters to be suppressed

20 is the hex value for a space

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as: **34567890**

<CR>

E4 Replace characters

Syntax = E4nnxx1xx2yy1yy2...zz1zz2 (nn: The total count of the number of characters (characters to be replaced plus replacement characters; xx1: The characters to be replaced, xx2: The replacement characters, continuing through zz1 and zz2)

【Exit Setup】

**** 【Enter Setup】**

Replace up to 15 characters in the output message, without moving the cursor.

E4 Example: Replace zeros with CRs in barcode data

If the barcode has characters that the host application does not want included, you can use the E4 command to replace those characters with something else. In this example, you will replace the zeros in the barcode above with carriage returns.

Command string: **E402300DF10D**

E4 is the “Replace characters” command

02 is the total count of characters to be replaced, plus the replacement characters (0 is replaced by CR, so total characters=2)

30 is the hex value for 0

0D is the hex value for a CR (the character that will replace the 0)

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as: **1234**

5678

ABC

<CR>

Save/Cancel Barcodes

After reading numeric barcode(s), you need to scan the **Save** barcode to save the data. If you scan the wrong digit(s), you can either scan the **Cancel** barcode and then start the configuration all over again, or scan the **Delete the Last Digit** barcode and then the correct digit, or scan the **Delete All digits** barcode and then the digits you want.

For instance, after reading the **Set the Maximum Length** barcode and numeric barcodes “1”, “2” and “3”, you scan:

- ✧ **Delete the Last Digit:** The last digit “3” will be removed.
- ✧ **Delete All Digits:** All digits “123” will be removed.
- ✧ **Cancel:** The maximum length configuration will be canceled. And the scanner still remains ready to read programming barcode.
